

# Sustainability Policy

Parklife Metro D&C is committed to delivering and operating an environmentally and socially sustainable rail system, working in partnership with Sydney Metro.

Our priority areas are:

## Climate Action

Reduce use of fossil fuels, energy consumption and embodied carbon, deliver and operate a carbon-neutral certified rail system, and provide resilience to impacts of climate change.

## Circularity and Supply Chain

Support local and Aboriginal suppliers, preference environmental and social certified products, and use circular economy principles to reduce material consumption and waste.

## People and Community

Support physical and mental health and wellbeing of staff and customers, collaborate with the communities we serve, and celebrate local culture.

## Nature and Water

Integrate blue-green infrastructure into the district to reduce heat island effect, enhance biodiversity, and treat stormwater as a natural resource.

We will use third-party certification tools and schemes to independently verify our performance and achievement of project goals and targets. We will foster a culture of continual improvement and publicly share our performance, knowledge and lessons learned.

Our Sustainability Policy aligns with and supports achieving Sydney Metro’s sustainability guiding principles.
